

Engineered for Performance

HURCO Technologies provides the right tools to make your efforts safer, highly productive and more profitable.

HURCO's hydrostatic test pumps are durable and easily maintained. Old Faithful™ provides years of reliable, high performance service.

HURCO
TECHNOLOGIES, INC.®

Old Faithful's unique manifold system reduces the number of leak points and the amount of work required to repair the pump or replace the diaphragms.

PERFORMANCE COUNTS

- Pumps can handle up to 10% chlorine solution.
- Unique bypass relief valve is designed to take pressure off the pump during engine start-up and safeguard against valve seat sticking that could cause pump damage.
- Utilizes a damper diaphragm to eliminate "bursting" damage when pressure is introduced to the inlet side of the pump. HURCO pumps can run completely dry!

If any HURCO product does not perform exactly as we claim, let us know within the first 10 days after purchase and we'll refund your money.

Like its namesake, the "Old Faithful™" line of hydrostatic test pumps are engineered for reliability and durability, with low cost maintenance and nearly "wear-free" operation.

Two pump models to fit your specific jobsite requirements. Both models come with a Handle Wheel Kit at no additional charge. Durable Powder Coat finish provides protection from corrosive chemicals.

HURCO offers the best available diaphragm pumps with Honda or Briggs & Stratton engines.
