

Description

The professional cut-off saw offers a unique long-term air filter system that delivers an extraordinary filtering capacity and durability. This makes the cut-off saw extremely productive, since the maintenance intervals are lengthened significantly. In addition, the high-torque engine increases the cutting performance. Since the hand-arm acceleration levels are less than 5 m/s², it is possible for an operator to work with the cut-off saw for eight continuous hours per day.

- A durable design ensures great reliability
- 3-stage air filter system with high-performance cyclone filter, foam prefilter and paper filter for very long maintenance intervals
- First-class vibration damping with hand-arm vibrations less than 5 m/s² and an optimized spacing between the handles provides greater operator comfort
- Cutting blade guard with all-round marking of the cutting blade position for precise guidance and exact cutting
- A high-torque engine increases cutting performance and thus productivity

Technical Data

- Displacement = 5.2
- Weight = 24.5
- Power = 5.8
- Length x width x height = 32.5 x 12.4 x 15.7
- Drive engine = single cylinder two-cycle gasoline engine
- Fuel to oil ratio = 50:1
- Fuel consumption = 2.4
- Arbor diameter = 1.0
- Nominal blade speed = 4240
- Cutting depth - max. = 5.0
- Disc diameter - max. = 13.8
- Fuel tank capacity = 1.2 qt
- Disc diameter - min. = 11.8
- Range - max. = 0.2
