1335	1"	80	6" - 15"	5.51" x 3.14"	8,81	6	3	3	2

ICM OF AMERICA

877-494-5793

An unbalanced middle rotor section causes the T-Hammer to generate vibration/impact in the pipe. This forceful action breaks deposits and other hard materials from plastic pipes. By adding turbine technology, it offers the capability to control the agitation. This nozzle can be used with recycled water, is constructed of hardened stainless steel and comes standard with one-piece ceramic inserts.

DANGER: This nozzle is for use in thick plastic pipes only!! NEVER use in clay, concrete or thin plastic pipes.
