

MANHOLE VACUUM TESTING EQUIPMENT

Part No. 110-2127 shown with Part No. 123-05 SUPER-VAC™

LANSAS MULTI-SIZE TEST HEADS

are designed with a robust bladder on a light weight aluminum frame. The reinforced field replaceable bladder gives us maximum expansion and will cover the widest size range in the industry. The Super Wingnut™ makes adjusting the height of the unit quick and easy. All of our Test Heads have a 1 ½” vacuum port, shut off valve, gauge measuring up to 30” of mercury, vacuum relief valve and a durable support bar. This unit is designed for use in the openings of manholes or other precast concrete structures.

CUSTOM 14” TEST PLATE FOR VACUUM PUMPS

The Lansas Super-Vac™ is a lower cost alternative for manhole vacuum testing. The new Super-Vac™ can pull over 40 CFM @ 10” of mercury. The Super-Vac™ can deliver more than 50% more volume than others on the market. The unit has no moving parts nor does it require any maintenance. Maximum vacuum is reached with an air source producing 80 CFM or better.

THE LANSAS FLAT PLATES

Are fabricated of lightweight aluminum. Both the 38” and 44” sizes have a thick and durable neoprene closed cell foam pad bonded to the plate. The soft pad makes it easy to get a vacuum seal and yet durable enough to be used over and over. The plate will seal on the manhole frame or cone. It will seal any flat surface such as septic systems, vaults and other precast concrete structures.

HIGH PERFORMANCE
